

Your current process

- You work on numerous delivery orders manually each year.
- Your order documents generate high processing costs.
- You are a major distributor, working with external contractors in unknown vehicles.

The picture on the left shows the delivery notes of ONE DAY, which previously had to be entered manually!

Your most important advantage as a user

- Solution for heterogeneous fleets.
- Vendor-neutral platform for online delivery data from fuel trucks.
- Accessible, paperless data transmission (end-to-end).
- Availability of delivery data immediately after unloading for the dispatcher and the carrier on site (tablet).
- Flexible data interfaces for individual office connections.
- Cloud based

TSG unify solves these problems for you

TSG unify is compatible with various flow meter products from different manufacturers and connects via plug-and play. The delivery data are immediately available for further processing in the service centre after unloading. Delivery note copies omitted. The erroneous manual delivery data entry is avoided. Online status messages.

The TSG unify handling

TSG unify works in the background and is maintenance-free (no accumulator, no battery). The installation is easy. The LED lights always show the current state. SW updates are carried out by remote transmission and the garage stay is thus eliminated. Delivery data and technical monitoring of the system are guaranteed via the service centre.
